

## FEATURES

- TI AM62Px Application Processor
  - Up to Quad Arm Cortex-A53 MPU at up to 1.4 GHz
  - 32 KB L1 Program Cache per Core
  - 32 KB L1 Data Cache per Core
  - 512 KB Shared L2 Cache
  - Advanced SIMD and floating-point extension (Arm Neon)
  - JTAG Emulation/Debug
  - High Security Field Securable Option
- Single Core Arm Cortex-R5F MCU at up to 800 MHz with 512 KB SRAM
- 3D Graphics Processing Unit supporting OpenGL ES 3.2 @ 50 GFLOPS - Processor Dependent
- Video Encode/Decode acceleration
- AM62x Processor Choices
  - AM62P54 (Quad Core, 3D)
  - AM62P52 (Dual Core, 3D)
  - AM62P34 (Quad Core)
  - AM62P32 (Dual Core)
- Up To 8 GB LPDDR4 CPU RAM
  - 32 bits wide, 13.2 GB/sec transfer rate
- Up to 256 GB eMMC FLASH
  - 8 bits wide, up to HS400 speed
- Up to 256 MB Octal/Quad SPI NOR FLASH
- Arm Cortex-R5F processor for boot, resource, and power management.
- Watchdog Timer
- Real-time clock
- Secure Boot
- Crypto Hardware Accelerators (AES, SHA, DRBG, PKA)

## STANDARD DDR4 SO-DIMM-260 INTERFACE

- 2 10/100/1000 Mbps EMACs
- 1 MIPI CSI 1.3 Camera Input, 4 lanes up to 2.5 Gbps
- Multi Display Support
  - Up to 3840x1080
  - 1 24-bit RGB output
  - 1x4 lanes OLDI/LVDS
  - 1x4 lanes MIPI DSI
- 3 CAN ports
- 7 UARTs
- 2 USB 2.0 Dual Role Device Ports
- 3 multi-Channel MCASPs
- 2 4 lane MMC/SD/SDIO
- 3 SPI, 3 I2C, GPIO
- eHRPWM, eQEP
- Single 3.3V Input Power Supply

## APPLICATIONS

- Battery Powered Instruments
- Mobile Applications
- Embedded Instrumentation
- Industrial Automation
- Industrial Instrumentation
- Medical Instrumentation
- Human Machine Interfaces (HMI)
- Closed Loop Motor Control

## BENEFITS

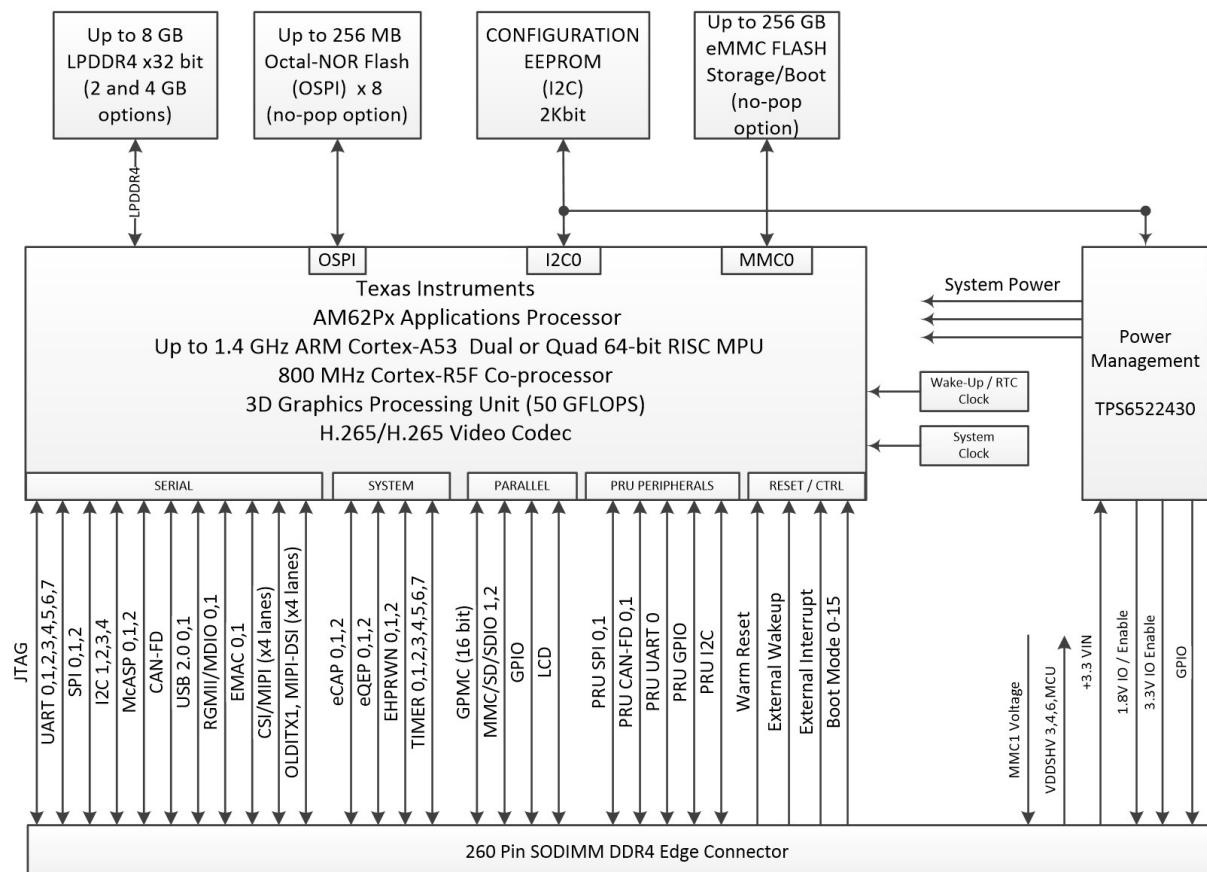

- Rapid Development / Deployment
- Multiple Connectivity / Interface Options
- Rich User Interfaces
- High System Integration
- High Level OS Support
  - Linux Kernel
  - Android

## DESCRIPTION

The MitySOM-AM62P series of highly configurable, small form-factor processor cards features one of Texas Instruments Sitara AM62Px Processors. The module includes (optional) eMMC FLASH, (optional) Octal or Quad SPI NOR FLASH, and LPDDR4 RAM memory subsystems. A MitySOM-AM62P provides a complete and flexible CPU infrastructure for highly integrated embedded systems.

The onboard AM62Px processor provides up to a Quad Core Cortex-A53 64-bit RISC processor with a NEON SIMD coprocessor. This microprocessor unit (MPU) can run a rich set of real-time operating systems containing software applications programming interfaces (APIs) expected by modern system designers. The ARM architecture supports several operating systems, including Linux and Android.

In addition to the Cortex-A53, the AM62Px family also offers a Single Core Arm Cortex-R5F MCU at up to 800 MHz. The Cortex-R5F runs independently of the main Cortex-A53 MPU complex and has access to all the on-chip peripherals as well as all external memory. This can be used for any purpose.

**Figure 1 MitySOM-AM62P Block Diagram**

Figure 1 provides a top-level block diagram of the MitySOM-AM62P processor card. As shown in the figure, the primary interface to the MitySOM-AM62P is through a standard DDR4 SO-DIMM-260 card edge interface. The interface provides power, synchronous serial connectivity, and many other interfaces provided by the Sitara processor. Details of the SO-DIMM-260 connector interface are included in the SO-DIMM-260 Interface Description, below.

### **MitySOM-AM62P Onboard LPDDR Memory Options**

The AM62Px processor includes one dedicated 32-bit LPDDR4 SDRAM memory interface. The MitySOM-AM62P includes up to 8 GB of LPDDR4 RAM integrated on board the module. The memory bus interface is capable of burst transfer rates of 13.2 GB / second.

### **MitySOM-AM62P Onboard Storage Memory**

#### **eMMC FLASH (Optional)**

Up to 256GB of on-board eMMC FLASH memory is connected to the AM62Px processor using the MMC0 interface peripheral. The eMMC FLASH memory is typically used to store the following types of data:

- Bootloaders
- ARM Linux / Android embedded root file-system
- runtime ARM software
- runtime application data (non-volatile storage)

#### **NOR FLASH (Optional)**

Up to 256 MB of on-board Octal or Quad SPI NOR FLASH memory is connected to the AM62Px using the OSPI/QSPI peripheral interface. The AM62Px provides additional SPI interfaces with both interfaces available on the SO-DIMM connector. This memory may be desirable for applications requiring more reliable/tolerant storage or faster access times.

#### **Configuration EEPROM**

The MitySOM-AM62P contains a (minimum) 256 x 8-bit EEPROM that is used to hold configuration data for the module. The EEPROM is connected to the AM62Px using the I2C0 interface at address 1010XXXb (0x50 to 0x57). This EEPROM is not available for customer use.

## External Interfaces

The AM62Px makes extensive use of functional pin multiplexing to provide a highly configurable device that can be tailored to a multitude of applications. A list of the interfaces/functions that are available to the user via the edge connector interface is provided below.

- 2 Universal Serial Bus (USB) 2.0 High-Speed port supporting host/peripheral/dual role mode
- 3 Controller-Area Network (CAN) ports with Can-FD support
- 3 Multichannel Audio Serial Ports (McASP)
- 2 Industrial Gigabit Ethernet MAC's (10/100/1000 Mbps)
- 2 SD/SDIO 4-bit ports supporting UHS-I
- 1 OLDI/LVDS display driver
- 1 24 bit RGB display driver
- 1 MIPI DSI 4 lane display driver
- 1 MIPI Camera Serial Interface (CSI-Rx), 4 Lane with DPHY.
- 3 Enhanced Capture (eCAP) Modules
- 3 Enhanced PWM (ePWM) modules
- 3 32-bit Enhanced Quadrature Pulse Encoder (eQPE) modules
- 4 Timers
- 3 Serial Peripheral (SPI) ports
- 7 Universal Asynchronous Receive/Transmit (UART) ports
- 3 Inter-Integrated Circuit (I2C) ports (I2C1, I2C2, & I2C3)
- General Purpose Memory Controller (GPMC) interface
- JTAG/Debugger port

Additionally, most of the pin multiplexed signals can be configured as general purpose I/O signals with interrupt capability.

### **Software and Application Development Support**

Users of the MitySOM-AM62P are encouraged to develop applications using the MitySOM-AM62P software development kit provided by Critical Link LLC. The SDK is an expansion of the TI platform support package for the AM62Px and includes a Linux root filesystem/distribution and compatible gcc compiler tool-chain with debugger.

### **Growth Options**

The MitySOM-AM62P has been designed to support several upgrade options. These options include various speed grades, memory configurations, and operating temperature specifications including commercial and industrial temperature ranges. The available options are listed in the section below containing ordering information. For additional ordering information and details regarding these options, or to inquire about a particular configuration not listed below, please contact a Critical Link sales representative.

## ABSOLUTE MAXIMUM RATINGS

If Military/Aerospace specified cards are required, please contact the Critical Link Sales Office or unit Distributors for availability and specifications.

Maximum Supply Voltage, Vcc                    3.5 V  
Storage Temperature Range                    -65°C to 80°C

## OPERATING CONDITIONS

Commercial Temperature Range	0°C to 70°C
Industrial Temperature Range	-40°C to 85°C

## SO-DIMM-260 Interface Description

The primary interface connector for the MitySOM-AM62P is the DDR4 SO-DIMM card edge interface which contains 5 types of signals:

- Power input (P)
- Power Output (PO)
- Dedicated signals mapped to the on-board Power Management device (PM)
- Dedicated signals mapped to the AM62Px device (I/O)
- Multi-function signals mapped to the AM62Px device (I/O/IO)

Table 1 contains a summary of the MitySOM-AM62P pin mapping.

**Table 1 SO-DIMM Pin-Out**

Pin	Type	Signal (Option 0)	Notes	AM62x Pin	Power / Domain	Signal Option 1	Signal Option 2	Signal Option 3	Signal Option 4	Signal Option 5	Signal Option 6	Signal Option 7	Signal Option 8	Signal Option 9

Note 1: GPMC\_AD[0..15] are strapped during power on reset as the BOOTMODE[0..15] pins. GPMC\_AD[3..15] must be pulled up or pulled down while the PORz\_OUT signal is asserted to VDDSHV3 or GND in order to select the proper boot device and configuration. See the AM62P Technical Reference Manual for more information. GPMC\_AD0, GPMCA\_AD1, and GPMC\_AD2 are set to logic 1, 1, 0 (respectively) on the SOM using 10K pullup/pulldown resistors to select a 25 MHz input clock frequency.

Note 2: Please reference Table 2 for information on the maximum current supply of these voltage outputs.

Note 3: PMIC\_PBn is pulled up to 3.3V and tied to pin 8 of the TSP6522430 PMIC.

Note 4: USB0\_VBUS\_DETECT and USB1\_VBUS\_DETECT are not 5V compliant and should not be connected directly to the VBUS signal of a USB circuit. The voltage must be reduced to be compliant with a 3.3V IO input. See the AM62P Technical Reference Manual for more information.

Note 5: VMON\_VSYS may be used for an external power supply monitor. It has a valid range of 0 to 1V and the threshold is 0.45V. If it is not used, it should be tied to GND.

Note 6: VPP should be 1.8V, used for programming AM62x Crypto Keys. VPP should only be powered after VDD\_1V8 is available and immediately prior to attempts to program the keys using AM62P software. Otherwise, tie to GND.

Note 7: LED\_RTn should normally be connected to ground and serves as the current return path for the SOM Power Good LED. For power sensitive applications, it should be disconnected to reduce current consumption when the SOM is powered off or sleeping.

Note 8: VSEL\_SD and VDD\_3V3\_ENABLE include 4.7K pullup resistors to +3.3V on the module

Note 9: The PMIC\_GPIO5 pin is connected to TPS6522430 Pin 11 and may be used as a general purpose 3.3V output pin.

Note 10: TCK, TDI, TMS, EMU0, and EMU1 include 4.7K pullup resistors to VDDSHV\_MCU on the module

Note 11: TRSTn include 4.7K pulldown to ground on the module

Note 12: MCU\_RESETz and RESET\_REQz do not have pullups on the modules and need to pulled up on the baseboard to 3.3V

Note 13: VSEL\_SD controls the voltage of VDDSHV\_SDIO (high = 3.3V and low = 1.8V)

## ELECTRICAL CHARACTERISTICS

**Table 2: Electrical Characteristics**

Symbol	Parameter	Conditions	Min	Typ	Max	Units
VIN	Voltage supply, volt input.		3.2	3.3	3.5	Volts
I <sub>VO_1PB</sub>	Max current draw <sup>2</sup>	1.8 volt IO output			1500	mA
I <sub>3.3</sub>	Quiescent Current draw <sup>1</sup>	3.3 volt input	-	360	-	mA
I <sub>3.3-max</sub>	Max current draw <sup>1</sup>	3.3 volt input	-	670	1000	mA
FCPU	CPU internal clock Frequency (PLL output)		200	1250	1400	MHz
FEMIF	GPMC bus frequency		-	133	-	MHz
	1. Power utilization of the MitySOM-AM62P is heavily dependent on end-user application. Major factors include: ARM CPU PLL configuration, CPU Utilization, and external LPDDR4 RAM utilization. 2. The MitySOM-AM62P module provides both 1.8V output supplies from the module. These outputs are sequenced from the PMIC and the maximum power output specified should not be exceeded as these supplies also power the module itself.					

## ORDERING INFORMATION

The following table lists the standard module configurations. For shipping status, availability, and lead time of these or other configurations please contact Critical Link at [info@criticallink.com](mailto:info@criticallink.com).

**Table 3: Standard Model Numbers**

Model	A53 Cores	GPU	Max Cortex-A53 Speed	NOR Flash	eMMC	DDR4 RAM	Operating Temp
62P52-TX-XXD-RC	2	Y	1400 MHz	N/A	N/A	2G	0C to 70C
62P52-TX-XXD-RI	2	Y	1400 MHz	N/A	N/A	2G	-40C to 85C
62P52-TX-X8E-RC	2	Y	1400 MHz	N/A	16GB	4G	0C to 70C
62P52-TX-X8E-RI	2	Y	1400 MHz	N/A	16GB	4G	-40C to 85C
62P54-TX-X9E-RC	4	Y	1400 MHz	N/A	32GB	4G	0C to 70C
62P54-TX-X9E-RI	4	Y	1400 MHz	N/A	32GB	4G	-40C to 85C
62P54-TX-XAE-RI-X*	4	Y	1400 MHz	N/A	64GB	4G	-40C to 85C

\*Models with -X include preproduction silicon for the processor and PMIC

## MECHANICAL INTERFACE

A mechanical outline of the MitySOM-AM62P is illustrated in Figure 2, below. Provisions for an M2 screw have been included for the side of the board away from the DDR4 SO-DIMM edge connector if heavy vibration environments are expected. A full STEP model of the SOM may be downloaded from the [Critical Link support site](#).
